POWERFUL BIG NEWS

NEW!...2 METER-6 METER RF POWER AMPLIFIERS

More power in the VHF band!... and there is plenty of it in the new Gonset 2 and 6 Meter RF Power Amplifiers. Model 903A (2 meter) and Model 913A (6 meter) has a power input of 500 watt in all modes of operation. A 4X150A is used in the final, and the equipment is rated for CCAS* service. Only 5 watts is required to drive the 903A and 913A to full rated output. Output impedance is 50 ohms nominal with an input impedance of 50 to 75 ohms. The all solid state power supply is self-contained within the amplifier chassis. All stages are metered and all controls are on the front panel for ease of operation. The new linear amplifiers may be used with any of the famous Gonset Communicator series, as well as being ideally compatible for the new Gonset Sidewinder series.

Amateur Net Price \$299.00

*Continuous Commercial and Amateur Service.

NEW!...GONSET SIDEWINDER 6 METER SSB-AM-CW TRANSCEIVER

The new Gonset Model 910A *Sidewinder* offers coverage of the entire 6 meter band in 1 mc segments. Like its mate—the Model 900A 2 meter *Sidewinder*—this ultra-compact transceiver features all-transistor receiver and power supply and partially transistorized transmitter (except mixer, driver, and final stages). Designed for mobile or fixed communications, the unit operates with separate AC (shown above) or DC power supplies.

Compiled by the National Bureau of Standards

Not all countries follow the International Time Zone System, but some use the time of some principal city as a standard and others have no standard time. The different time zones of the world are numbered east and west of Greenwich. The zone number when added or subtracted, as shown in the following table, from the time of the zone gives the corresponding Greenwich time. Thus zones to the east have faster time than Greenwich and are indicated as minus (—), while those to the west have slower time and are indicated as plus (+).

‡No definite standard time used.
§1 hour or 2 hours fast, fixed annually.

With this chart you can convert standard time in any time zone to GMT or tell what time it is in other parts of the world. To correctly use this chart visualize each horizontal line as a complete circle. From your time zone tracing horizontally to the right (Counter Clockwise) it will be tomorrow when you pass midnight and yesterday when you pass the International date line. To the left (Clockwise) it will be yesterday when you pass midnight and tomorrow when you pass the International date line. There is no change in date when you pass both midnight and the International date line going in one direction. For instance at 8 PM in New York Eastern Standard Time it is 2 AM tomorrow in Berlin, Germany and 11 AM tomorrow in Sydney, Australia. Always trace in the shortest direction from your time zone to find what time it is in any other zone. Copyright 1938 Radio Amateur Call Book, Inc., Chicago, USA.

ON GOOD PHONE OPERATING

1. Listen much . . . with care. Avoid distractions in your operating room. Tune the band well after each call.
2. Time your calls; monitor your own frequency. Call only when a station is free.
3. Make short calls, with breaks to listen. Speak clearly, at a steady, modest rate. Three short calls are better than one long one.
4. Use push-to-talk technique . . . speak near the mike. Watch the modulation indicator. Keep local background noise at a minimum.
5. Make notes. Avoid missing points for comment. Jot down topics to avoid repeats.
6. Talk in connected thoughts and phrases. Notes will help avoid mixing up subjects. Push-to-talk technique will keep brother amateurs from calling you a monologist.
7. Speak naturally. QSOs need not be cut and dried. Make them interesting. Avoid exhibitionism. Use proper operating form to promote efficiency in communication and add respect and prestige for your station.

Use of this standard list is recommended by ARRL. Haphazard selection of words often results in confusion. A degree of uniformity in use of phonetic words reflects favorably on your individual operating, and on the whole amateur service.

OIL CAPACITORS

For transmitter power supplies and other high voltage applications. Hermetically sealed in rugged metal cases. Oil-impregnated, oil-filled. High insulation resistance.

SK-1 SUPPRESSIKIT®

Contains everything needed for effective mobile radio noise suppression of R-F interference up to 400 mc. For autos with 6 or 12 volt generators.

DIFILM® CAPACITORS

Black Beauty® Molded Tubulars

Dual dielectric (polyester film and paper) combines best features of both. Solid impregnant, nothing to leak or drip. Molded phenolic case. Withstand high temperatures, high humidity.

Orange Drop® Dipped Tubulars

Dual dielectric (polyester film and paper), with solid impregnant. Double-dipped in epoxy resin. Radial leads, ideal for printed wiring boards.

CERAMIC CAPACITORS

Cera-Mite® Disc Types

Extremely wide range of capacitance values and voltage ratings. Available in general-application, high-K, temperature-stable, and temperature-compensating types.

Buttonhead Types

Flat disc capacitor element sealed in top of hex head. Screw stud for easy mounting. Low self-inductance, high self-resonant frequency. Ideal for by-pass or feed-thru applications.

WIREWOUND RESISTORS

Koolohm®

Ceramic-shell Types

Insulated-shell power resistors wound with ceramic-insulated wire. Completely moisture-proof. Ratings to 120 watts in inductive and non-inductive construction.

Blue Jacket®

73?

10AR?

6UP?

ATV?

73 Magazine is the fastest growing ham magazine in the world. Just over three years old, 73 features technical and construction articles instead of the usual mass of operating news. It also features editorials by W2NSD which are shaking the Establishment to its core. A subscription to 73 is only \$4 per year (world wide), two years for \$7, three for \$10, life for \$50.

The INSTITUTE of AMATEUR RADIO, Inc., a non-profit club second only in size to the ARRL, is now working to set up the best possible climate for the next Geneva frequency allocation conference (probably 1965). The Institute program: An information office in Washington to see that all officials get news of amateur public service and to answer any questions about amateur radio that may arise. To help amateurs fighting legal battles that could set a precedent against amateur radio. To give all probable delegates to the next Geneva conference a steady supply of info on the value and service of amateur radio. Dues are \$10 a year which is little enough to invest in the survival of

our hobby. If you have been following events you know that we are going into the most crucial conference ever held and that we most desperately need the complete backing of our own government as well as foreign governments. To get this backing we have to work hard right now to overcome the bad publicity of TVI and put across our story of public service. This cannot wait until next year.

6Up Magazine is the only VHF magazine now in publication. Edited by Jim Kyle K5JKX, this magazine is published monthly and provides the latest operating news, skeds, predictions, technical articles, and all other info of interest to VHF and UHF operators. Yearly subscription is \$2.

ATV Bulletin is published every other month for all amateurs interested in amateur television. Latest circuits, surplus conversions, and a list of active stations. \$2 a year.

Radio Bookshop; Books of virtually all publishers are available from the

Radio Bookshop division of 73. All published books are carefully screened and those of greatest interest to amateurs listed.

73 Parts Kits; Kits of parts are available from 73 for most of the simpler construction projects that appear in the magazine.

73, the Institute of Amateur Radio, the Radio Bookshop, 6-Up Magazine, ATV Bulletin, 73 Parts Kits, and all the other projects are being run by a small group of dedicated amateurs (W1AER, W1AIM, K1CJD, WA1AWG, K9YOE/1, K9ZTE/1, WA4HWH/1, W5WNF/1, K1FYP, W2NSD/1, etc.) up in the mountains of New Hampshire in the interests of low overhead. We really need your help as a member of the Institute and a subscriber to 73.... How about it?

Notes on the Use of QN Signals

- The QN signals listed above are special ARRL signals for use in amateur c.w. nets only. Other meanings that may be used in other services do not apply.
- Some QN signals are for use by net control stations only; these are marked with an asterisk (*). Others have slightly different meanings when used by the NCS and net stations; in this case, the meaning when used by the NCS is marked with an asterisk (*).
- Some QN signals have two meanings, the difference depending on how or by whom used. Examples: (a) QNC, when used as a preface to transmission of a message, carries its first meaning; when used by a station reporting into the net (e.g., W9NCS DE W9NET QNI QNC), it carries its second meaning. (b) QNI, when used by the NCS, is a request for stations to report in; when used by a net station, it means that this station is reporting in. (c) QNJ, when used alone, carries its first meaning; when followed by a call, it carries the second meaning.
- QN signals are never followed by a question mark, even though the meaning may be interrogatory.
- Do not use QN signals on phone nets. Say it with words.
- Use QN signals in nets only. They are not for use in casual amateur conversation.
- Make frequent use of standard international "Q" signals in traffic nets, for meanings not covered by QN signals. Examples: QRU, QRV, QSV, QTA, QTB, QTX, etc.

DX OPERATING CODE

(For W/VE Amateurs)

Some amateur DXers have caused considerable confusion and QRM in their efforts to work DX stations. The points below, if observed by all W/VE amateurs, will help make DX more enjoyable for all.

1. Call DX only after he calls CQ, QRZ? or signs SK, or 'phone equivalents thereof. Make your calls short.
2. Do not call a DX station:
 - a. On the frequency of the station he is calling until you are sure the QSO is over (SK).
 - b. Because you hear someone else calling him.
 - c. When he signs KN, AR or CL.
 - d. Exactly on his frequency.
 - e. After he calls a directional CQ, unless of course you are in the right direction or area.
3. Keep within frequency band limits. Some DX stations can get away with working outside, but you cannot.
4. Observe calling instructions given by DX stations.
Example: "15U" means "call 15 kc. up from my frequency".
"15D" means down, etc.
5. Give honest reports. Many DX stations depend on W/VE reports for adjustment of station and equipment.
6. Keep your signal clean. Key clicks, ripple, feedback or splatter give you a bad reputation and may get you a citation from FCC.
7. Listen and call the station you want. Calling CQ DX is not the best assurance that the rare DX will reply.
8. When there are several W or VE stations waiting, avoid asking DX to "listen for a friend". Also avoid engaging him in a rag chew against his wishes.

(For Overseas Amateurs)

To all overseas amateur stations:

In their eagerness to work you, many W and VE amateurs resort to practices which cause confusion and QRM. Most of this is good-intentioned but ill-advised; some of it is intentional and selfish. The key to the cessation of unethical DX operating practices is in your hands. We believe that your adoption of certain operating habits will increase your enjoyment of amateur radio and that of amateurs on this side who are eager to work you. We recommend your adoption of the following principles:

1. Do not answer calls on your own frequency.
2. Answer calls from W/VE stations only when their signals are of good quality.
3. Refuse to answer calls from other stations when you are already in contact with someone, and do not acknowledge calls from amateurs who indicate they wish to be "next".
4. Give everybody a break. When many W/VE amateurs are patiently and quietly waiting to work you, avoid complying with requests to "listen for a friend".
5. Tell listeners where to call you by indicating how many kilocycles up (U) or down (D) from your frequency you are listening. Examples: c.w. - "CQ DX CQ DX CQ DX 15U DE AC4YN AC4YN AC4YN 15U K"; 'phone - "Answer 15 kilocycles up from my frequency".
6. Use the ARRL-recommended ending signals, especially KN, to indicate to impatient listeners the status of the QSO. (KN means "Go ahead (specific station), all others keep out".
7. Let it be known that you avoid working amateurs who are constant violators of the above principles.

RADIO AMATEURS PREFIX

Equator 0 300 600 900 1200 1500 1800 Equator

Scales in Statute Miles for Degrees of Latitude

The Mercator projection used here was devised in 1569. It has proved especially useful in navigation since compass bearings can be measured directly. True scale is maintained along the equator but away from the equator "stretching" occurs. Thus, a different scale of miles is required for each parallel of latitude as shown above. The greater distortion in high latitudes accounts for the exaggerated size of Greenland.
